

Process Silver Data(Configure DLT pipeline settings)

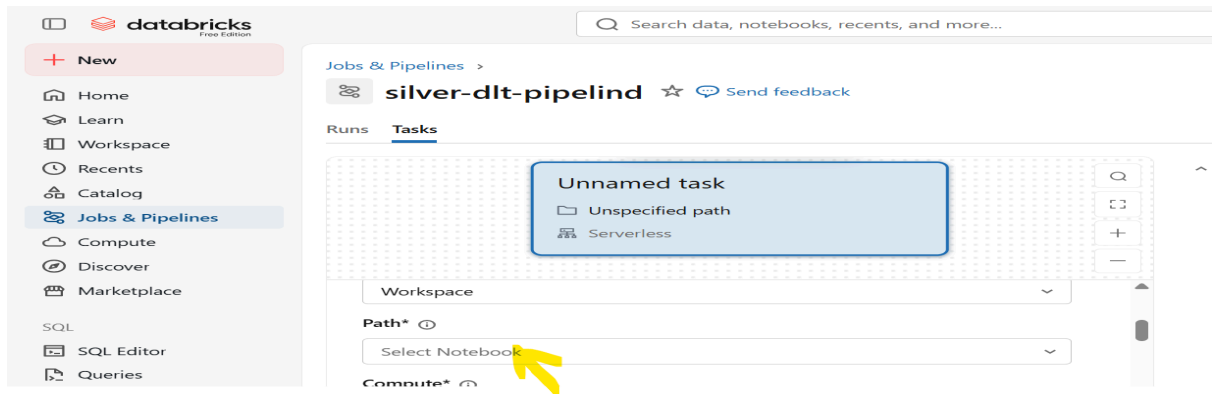

1) Navigate to the left-hand sidebar menu and click on **Jobs & Pipelines**. Then, create a new job by clicking on either **Job** or the **Create** button in the top-right interface.

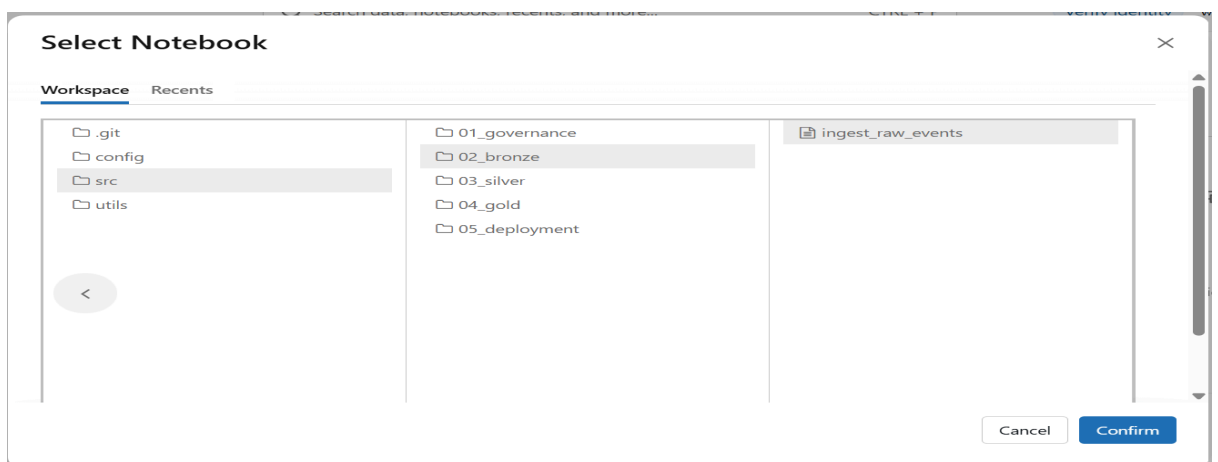

2) In the job configuration canvas, enter a descriptive title for your pipeline (e.g., **silver-dlt-pipeline**). Under the task selection choices, click on **Notebook (Run a notebook)** to define the type of task for this pipeline step.

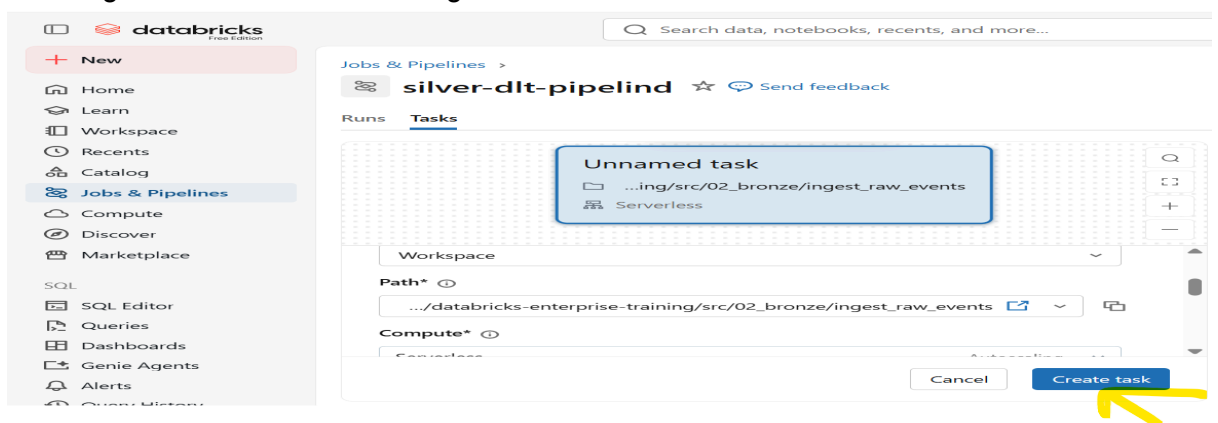

3) Locate the task settings panel on the right side. Scroll down to the **Path** field and click inside the input box (labeled **Select Notebook**) to open the file browser modal.

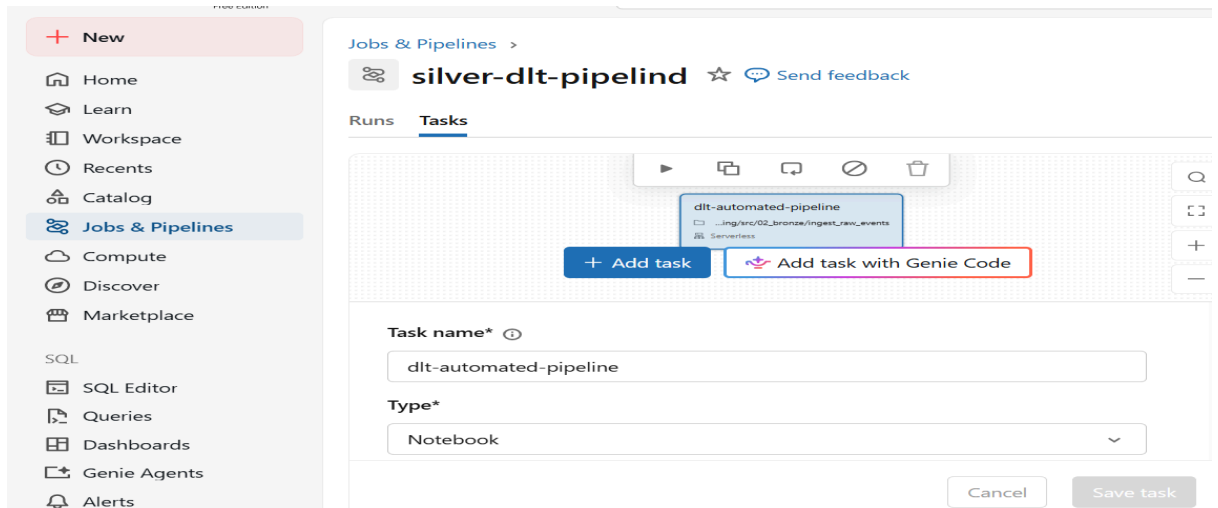

4) In the modal window, navigate through your workspace directory structure to find and select the intended notebook file, then click **Confirm** to link it to the task.

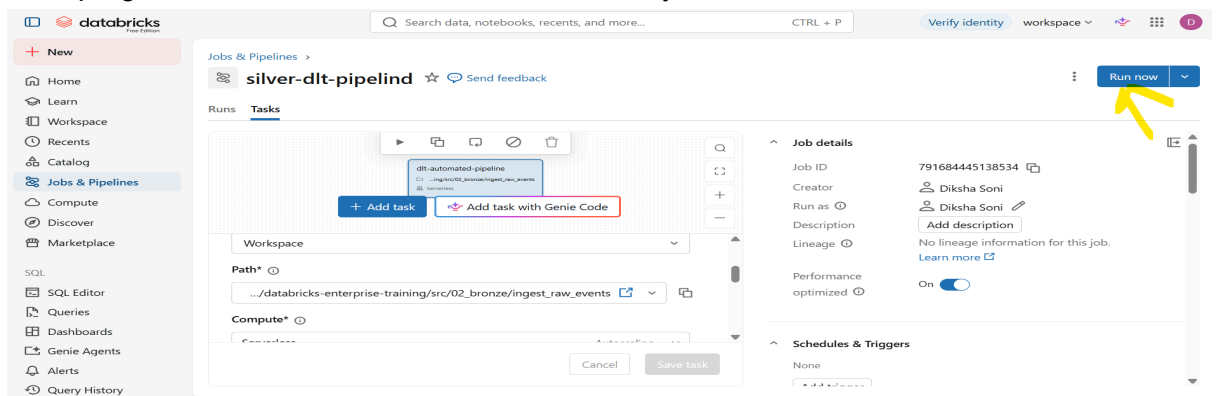

5) Verify the selected path details in the task configuration form, and then click **Create task** in the bottom-right corner to finalize adding the task.

6) Assign a clear, unique identifier in the **Task name** field (e.g., **dlt-automated-pipeline**), and click **Save task** to apply your configuration.

7) Once the task is configured and saved, review the job overview dashboard and click **Run now** in the top-right corner to initiate execution immediately.

8) Monitor the run status in the execution graph and details panel to confirm that the pipeline workflow completes successfully.
